# Herbal Therapy of Sexual Disorders and Debilities Practiced by Oraon Tribals of Palamu Division, Jharkhand, India

## Raphael R Marandi, S John Britto, Ignace Kindo

#### Abstract

Sexual disorders and debilities are on the increase worldwide because of modern food habits, lifestyle and increasing etiological factors. Several modern treatments are employed which are not only expensive but are also often associated with some side effects. This has intensified the search for noble therapy with the medicinal plants. The herbal therapy is readily available in the rural areas at reduced costs and with reduced side effects. These treatments range from sexual dysfunctions to pregnancy, delivery and breast feeding the infants. This paper deals with the herbal formulations of the Oraon tribals of Palamu division for the treatment of sexual disorders and debilities such as vigor, vitality, impotency, erectile dysfunction, premature ejaculation, weak semen, hydrocele, spermatorrhoea, leucorrhoea, menstrual disorders, barrenness, lactation and delivery related issues.

Keywords: Herbal therapy, Sexual disorders, Debilities, Oraon tribals, Palamu division

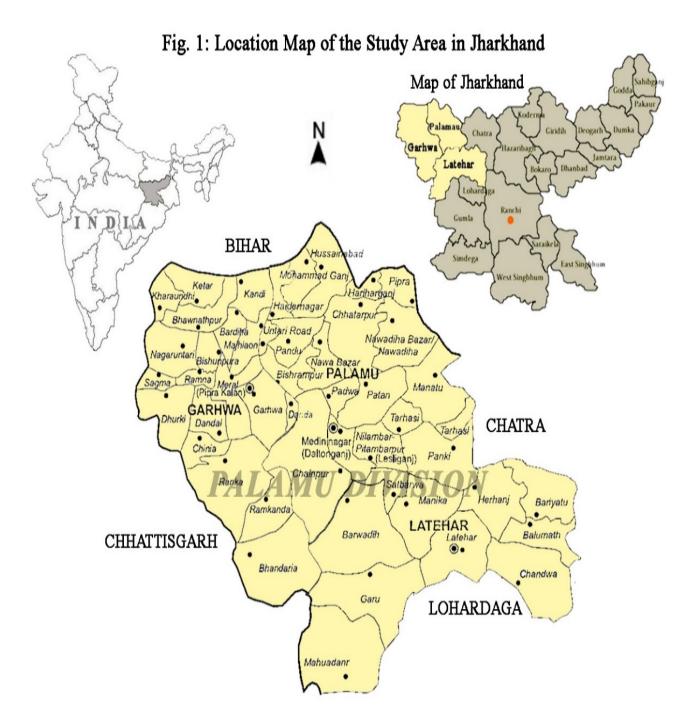

#### 1. Introduction

Since time immemorial, plants have been used for food, fodder, clothing and medicine. The Indian tribals have great love and knowledge of medicinal plants. They use them for wide range of health related problems. The Oraons are one of such tribal groups who dwell in the hill tracks and foothills of Palamu division of Jharkhand. They largely depend on agricultural and forest products such as leafy vegetables, flowers and fruits [1]. After a day's hard work, they drink handia (locally brewed drink) every day. There cannot be any celebrations or ceremonies without handia. The boys are ushered into drinking at childhood itself by their grandparents. By the age of adulthood, several Oraon youths become chronic alcoholics resulting in them neurologic diseases and sexual dysfunctions or debilities [2]. Since ancient times, humans have searched for aphrodisiacs and potent drugs of plant origin to overcome various sexual disorders and disabilities and to achieve mental satisfaction [3]. The types of sexual disorders in men are sexual dysfunctions (reduced libido, erectile dysfunction, and premature ejaculation), impotency, weak semen, spermatorrhoea and hydrocele while in women are menstrual disorders, barrenness, lack of lactation, delivery related issues and leucorrhoea [4, 5]. Hence, this study is an effort to document the crude knowledge of the rural herbalists regarding herbal formulations used for the treatment of sexual disorders and debilities, which are caused by excessive drinking and other addictions in the study area (Fig. 1). This study has also documented herbal remedies for sexually transmitted diseases.

## 2. Materials and Methods

## 2.1. Study Area

Palamu Division lies between 23° 18'36' and 24° 38'6" North latitude and 83° 19'48" and 84° 28'12" East longitude in the state of Jharkhand, India. It has an area of 12,747 sqkm consisting of three districts - Garhwa, Latehar and Palamu (Fig. 1). Palamu is a forested division with the total population of 44,84,379 (Census 2011). The Oraons are one of major tribal groups in all the three districts, namely, Garhwa, Latehar and Palamu. They are mainly agricultural labourers and also depend on the forest products for their living which has enriched them with a good traditional knowledge on healthcare practices [6]

## 2.2. Methodology

An ethnobotanical survey was carried out during the year 2013-2015 in the Oraon villages of all the three districts of Palamu division: Garhwa, Latehar and Palamu. The reputed tribal healers were identified and selected with the help village elders, forest officers and local health workers. The semi-structured questionnaires and personal interviews used for the collection of data. The medicinal plants were photographed with a digital camera and the voucher specimens were prepared with the help of the tribal healers. The voucher specimens were deposited in the Rapinat Herbarium, Tiruchirappalli, India. The botanical names were also crosschecked with the earlier published literatures.

## 3. Results and Discussions

## 3.1. Results

The ethnobotanical formulations used against various sexual disorders and debilities are given in **Table 1.** They are arranged according to the type of diseases and number of formulations. For every formulation, the botanical names of the medicinal plants are given followed by local names in *Kurukh* and *Sadari* and the family in parenthesis. The method of preparation and the mode of administration are given under herbal formulations which consist of one of the local names of medicinal plant and the amount of plant parts required.

 Table 1: Enumeration of Herbal Therapy of Sexual Disorders among Oraon Tribals

Sexual Disorders	Botanical Name, Local Name (Family)	Herbal Formulations
	Asparagus racemosus Willd., Kaisago, Satavar (Asparagaceae) Asparagus adscendens Roxb., Pandru musli, Safed musali (Liliaceae) Curculigo orchioides Gaetrn, Dinda kita, Karia musali (Hypoxidaceae) Tinospora cordifolia Willd., Guduchi, Giloy (Menispermaceae)	20g roots of <i>Safed musali</i> , <i>Kali musali</i> and <i>Satavar</i> are powdered and mixed well. It is mixed with 2g dried and powdered latex of Guduchi. 5mg of the preparation is taken with a spoonful of honey for 30 days
	Butteneria herbacea Roxb., Kamraj (Apiaceae) Peucedanum dhana Ham., Bhojraj (Apiaceae) Peucedanum nagpurense Clarke, Tejraj (Apiaceae)	2g each of roots of <i>Bhojraj</i> , <i>Kamraj</i> and <i>Tejraj</i> are ground into paste and taken with a spoonful of honey once a day for 30 days.
Vitality & Virility	Abrus precatorius Linn., Gunj, Ghunj (Fabaceae) Asparagus racemosus Willd, Kaisago, Satavar (Asparagaceae) Asparagus Adscendens Roxb., Pandru musli, Safed musali (Liliaceae) Curculigo orchioides Gaetrn, Dinda kita, Karia musali (Hypoxidaceae) Holostemma rheedii Wall., Chint, Chirvel (Asclepiadaceae) Mucuna pruriens Linn., Alkusi, Alkusa (Fabaceae) Pueraria tuberosa Roxb., Pakhna kohonda, Patal kumda (Fabaceae)	20g dried roots of <i>Kaisago</i> , <i>Safed musali</i> , <i>Karia musali</i> , <i>Chint</i> and tuber of <i>Patal kohonda</i> are powdered. 10g dried roots of <i>Gunj</i> and 10g seeds of <i>Alkusi</i> are powdered separately.  Both the powders are mixed well. 10mg of this powder is taken twice a day with honey for 40-60 days.
Oligospermia / Weak Semen	Pueraria tuberosa Roxb., Pakhna kohonda, Patal kumda (Fabaceae) Dalbergia sissoo Roxb., Shisham, Sisu (Fabaceae)	2mg of the powder of <i>Patal kohonda</i> tuber is consumed with <i>mishri</i> and a cup of cold milk for 30 days.  The paste of 5g of tender leaves of <i>shisham</i> is taken with a cup of milk for 15-30 days.
	Ficus racemosa Linn., Dumbari, Dumri (Moraceae) Ficus benghalensis Linn., Bada, Bar (Moraceae)	Equal amount of dry fruits of <i>Dumbari</i> and <i>Bada</i> , and <i>Mishri</i> are powdered, and mixed well. 4mg of the powder is taken with a cup of cold milk for 30 days.
	Tinospora cordifolia Willd., Guduchi, Giloy (Menispermaceae)	4mg of powdered latex is taken with a spoonful of honey for 30 days.
	Asparagus racemosus Willd., Kaisago, Satavar (Asparagaceae) Curculigo orchioides Gaetrn, Dinda kita, Karia musali (Hypoxidaceae)	Equal amount of roots of <i>Kaisago Dinda kita</i> and <i>Mishri</i> are powdered and mixed well. 4mg of the powder is taken with a cup of cold milk for 30 days.
	Asparagus racemosus Willd., Kaisago, Satavar (Asparagaceae) Mucuna pruriens Linn., Alkusi, Alkusa (Fabaceae)	2mg of the powder of <i>Kaisago</i> roots and the seeds of <i>Alkus</i> are taken with a cup of cold milk for 30 days.
Azoospermia (Impotency)	Ficus benghalensis L., Bada, Bar (Moraceae)	6-7 drops of latex is consumed with sugar candy for 3 months.
	Smilax macrophylla Roxb., Rampaun, Ramdatun (Smilacaceae)	The twig of <i>Rampaun</i> is used as a toothbrush for 3 months.
Spermatorrhoea	Pueraria tuberosa Roxb., Pakhna kohonda, Patal kumda (Fabaceae) Asparagus racemosus Willd, Kaisago, Satavar (Asparagaceae) Centella asiatica Linn., Muxa arxa, Beng	20mg of the tuber powder is taken with <i>mishri</i> for 15-20 days.  The decoction is prepared from 100g <i>Kaisago</i> roots, 50g
	sag (Apiaceae) Pterospermum acerifolium Linn., Makchund, Kanakchampa (Sterculiaceae) Vitex penduncularis Wall., Charaigorh, (Verbenaceae)	Beng sag leaves and 100g each of the barks of Makchund and Charaigorh. One cup of the decoction is taken twice a day for 15-20 days.
Barrenness (Male & Female Infertility)	Asparagus racemosus Willd., Kaisago, Satavar (Asparagaceae) Asparagus Adscendens Roxb., Pandru musli, Safed musali (Liliaceae) Diplocyclos palmatus Linn., Edakhan,	2g each of fresh roots of <i>Kaisago</i> and <i>Safed musali</i> are ground and dissolved in a cup of water. The filtrate is give to couples for 30-40 days.  After the period, 6-9 seeds are given to the woman for 5
	Shivlingi (Cucurbitaceae)  Flemingia strobilifera Linn., Bhui galphuli (Fabaceae)	days. 5g roots of <i>Buin galphuli</i> , 10g roots of <i>Kaisago</i> and 20g roots of <i>Minjur chundi</i> are ground and dissolved in a litre

	4 337'11 1 27 1	- C
Absent Menstruation	Asparagus racemosus Willd., Kaisago, Satavar (Asparagaceae)	of water. One cup of the filtrate is taken once a day for 5 days.
Absent Menstruation	Elephantopes scaber Linn., Minjur chundi (Asteraceae)	
	Asparagus racemosus Willd, Kaisago,	
	Satavar (Asparagaceae)	
	Curculigo orchioides Gaetrn, Dinda kita,	3g fresh roots of <i>Kaisago</i> and <i>Anantmul</i> , 1g fresh root of
	Karia musali (Hypoxidaceae)	Karia musali are ground and dissolved in cup of water. The
	Hemidesmus indicus (L.) R.Br., Choti	filtrate is given for 8 days.

## 3.2. Discussions

The herbal therapy of sexual disorders and debilities consisting of simple methods of treatment developed by several trial-anderror methods over a long period still hold an important place in several tribal societies [7]. The *Vaidhyas* of the Oraon tribals have developed unique formulations for specific sexual disorders. The common methods of preparation of the formulations are decoction, extract, infusion, powder and juice which are often added with mishri or jaggery or honey. Some of the precious ethnomedicinal plants are shown in Fig. 2. Some of the formulations consist of a single plant therapy like menorrhagia with the flowers of Madhuca indica, erectile dysfunction with the corm of Musa paradisiaca and the root of Abelmoschus esculentus etc. Other formulations consist of multiple plants therapy. The synergetic uses of the plant species promote hormonal activity in the body and improve the quality and quantity of semen [8]. The herbal medicine improves emotional stability and hormonal activity [9]. They are also powerful remedies of disorders such as spermatorrhoea, leucorrhoea, azoospermia, oligospermia and various types of menstrual disorders which are often the barriers to procreation. The inability to reproduce projects the

married couples as social stigma in several Indian societies, and have to bear painful taunts.

The survey revealed that several cases of sexual disorders and debilities have been successfully treated by the given formulations. Some of the reputed tribal healers have treated the cases of sexual disorders as follows – Leons Tirkey (2000), Praful Xalxo (100), Nandkishor Oraon (50), Ramnandan Minj (25), Theodor Panna (20), Khushdil Tirkey (40), Pauru Nagesia (20), Dayawanti Minj (500), Gabriel Kujur (1000), Joseph Tirkey (1000), Joseph Kujur (1500), John Tirkey (200) and Pushpa Minj (600).

The tabulated data reveal that the roots of *Asparagus racemosus*, *Curculigo orchioides*, *Pueraria tuberosa*, the barks of *Soymida febrigfuga*, *Symplocos racemosa*, the stem of *Tinospora cordifolia* and the seeds of *Abrus precatorius* and *Mucuna pruriens* are common ingredients in several formulations which have also been reported by earlier researchers [10, 11, 12]. *Butea monosperma* and *Ficus racemosa* have been reported as aphrodisiac by a few researchers [13, 14]. The study revealed that the Oraon tribals use *Soymida febrigfuga*, *Symplocos racemosa*, *Hemidesmus indicus* and *Vitex penduncularis* mostly for gynecological disorders.

Author - Data Collection from Vaidhyas Herhanj, Latehar

The Ancient Indian medicinal system of Ayurveda has given a great importance to sexuality in human life and has devoted to it under the title virilization which includes aphrodisiacs for erectile dysfunction, causes of infertility, spermatogenesis, semenogenesis, reproduction, methods of correcting defective semen and sexual satisfaction [15, 16]. In modern medication of erectile dysfunction through popular Viagra is effective, but in some men it is not compatible and works in less than 70% of men and also gives certain side effects [17]. It is the same case with the medication of gynaecological disorders. In this regard, the herbal remedies are the better alternatives with lesser or no side effects. Moreover, enhancing healthy sexuality is possible with the use of natural plants and nutrients [18].

### 4. Conclusion

The findings of the study are supportive of the herbal formulations for sexual disorders and debilities which adversely affect the mood, wellbeing, and interpersonal functioning and relationship. Successful treatment of sexual disorders may improve not only sexual relationships, but also the overall quality of life. These formulations have potent capabilities of treating sexual dysfunctions and diseases. However, the important issues such as efficacy, quality, safety and standardisation of doses are needed to be addressed. Moreover, the reckless exploitation of precious medicinal plants by the traders has threatened many of them in the study area, such as Asparagus adscendens, Asparagus racemosus, Curculigo orchioides, Phyllanthus emblica, Pterospermum acerifolium, Pueraria tuberosa, Soymida febrigfuga, Symplocos racemosa, and Tinospora cordifolia. Afforestation, protection and cultivation of the wild medicinal plants are the

need of the hour for long time use.

## 5. Acknowledgments

The author is grateful to the Director and Head, and also to the staff of the Rapinat Herbarium and Centre for Molecular Systematics, St. Joseph's College (Autonomous), Tiruchirappalli, Tamilnadu. He is also grateful to the *Vaidhyas* of Palamu division for providing information. He thanks CSIR, New Delhi for financial support through Rajiv Gandhi National Fellowship.
